SUMMARY

I am a Software Engineering student at Del Institute of Technology with hands-on experience in building and deploying backend architectures and scalable web applications. I specialize in developing server-side systems using Laravel/PHP, Python, and Go, alongside designing relational and non-relational databases with MySQL and MongoDB. Familiar in Linux environments, Git, Docker, and microservices architecture, I am eager to contribute to an agile engineering team by writing clean, maintainable code and building highly reliable backend solutions.

EXPERIENCE

Assistant Project Controller (Intern)

Huawei

XLSmart Project (XL-Smartfren MOCN)

June 2025 – Dec 2025

- Led Coordinated weekly meetings with 30+ subcontractors, ensuring site access and permit management across South & Central Sumatera.
- Tracked project milestones and issues, escalating delays and managing mitigation with internal teams and subcontractors.
- Developed a Python automation to fetch project data from Google Sheets, generate Excel reports, and send email summaries on a scheduled basis (Mon/Fri).
- Streamlined permit submission by creating a standardized guideline, improving processing efficiency by ~40%.

Research Trainee

Remote, University of Chicago

System and AI Research Training Program

Jan 2025 – Jul 2025

- Selected to participate in a prestigious international research training program led by Prof. Haryadi Gunawi, admitting only the top 50 students in computer science and related disciplines.
- Analyzed over 40+ technical papers in Software Engineering across top conferences and successfully reproduced 5 technical papers.

Co-Mentor

Coordinating Ministry for Human Development and Culture

Kewirausahaan Pemuda Danau Toba (KWP)

Dec 2023 - Sep 2024

- Provided mentoring to program participants to enhance the entrepreneurial capacity of youth in the Lake Toba Region, assisting them in starting and managing their businesses.
- Designed, implemented, and provided mentoring for entrepreneurship training programs focusing on managerial, innovation, and marketing aspects.

PROJECTS

Final Year Thesis Project (TAPATUPA)

Backend Developer - Private Project

- Architect a centralized API Gateway for a multi-tenant microservices ecosystem using Laravel to ensure secure routing and prevent cross-tenant data exposure.
- Develop a dedicated Authentication Service utilizing JSON Web Tokens (JWT), designed to robustly manage user sessions and block unauthorized or expired access requests.
- Implement Redis-backed rate-limiting policies at the gateway layer to optimize backend resilience and handle high-traffic loads effectively.
- Design an experimental load-testing framework to evaluate the performance impact of cryptographic token validation on latency and system throughput.

Balige Traditional Market (E-commerce)

Full-stack Developer - [Github](#)

- Led a team of 5 in developing a scalable e-commerce platform, focusing on server-side business logic using the MVC architectural pattern in Laravel.
- Designed and implemented relational database schemas using MySQL to efficiently manage inventory, shopping carts, and order processing.
- Managed routing, user sessions, and authentication protocols to ensure data security and safe transactions across the platform.

- Created comprehensive project documentation, including system architecture, user flows, and backend feature specifications.

Hutanta Coffee (Informational & Ordering Website)

Backend Developer - [Github](#)

- Developed a Role-Based Access Control (RBAC) system using PHP and SQL to securely manage user sessions and enforce privilege separation between buyers and administrators.
- Built the server-side data processing architecture to handle real-time order tracking and product inventory management on the admin dashboard.
- Wrote efficient SQL queries to accurately synchronize transaction data between the online WhatsApp ordering system and internal database records.
- Conducted backend testing and debugging to ensure system stability and alignment with the company's operational goals.

EDUCATION

Del Institute of Technology, Undergraduate of Software Engineering

Aug 2022 - Aug 2026 (Expected)

- GPA: 3.71/4.0

SKILLS

Programming Languages	: PHP, Python, C, Java, JavaScript, Go
Backend & Frameworks	: Laravel, React, Node.js
Databases	: MySQL, PostgreSQL, SQLite, Redis, MongoDB
Tools & Miscellaneous	: API Gateway, RESTful APIs, Git, JWT, Docker, Microservices, Linux CLI
Methodologies	: Scrum, Agile, SDLC, Lean
Project Management & Soft Skills	: System Design, Problem-solving, Project Planning, Cross-functional Teamwork, Stakeholder Management

CERTIFICATIONS

Junior Mobile Programmer

Badan Nasional Sertifikasi Profesi (BNSP)

Issued: May 2024

- Certified by BNSP in Software Development with competency in Junior Mobile Programming. Successfully built and tested a mobile application as part of the assessment. Certification valid for 3 years.

ORGANIZATION

Student Association of Software Engineering IT DEL (HIMATERA)

Oct 2024 - Present

Head of Event Division

- Led the end-to-end organization of key events, managing multiple technical webinars and inaugurations while meeting strict deadlines and securing internal/external sponsorships.

Google Developer Student Club (GDSC) IT Del

Sep 2023 - Aug 2024

Member

- Worked with peers on group projects, applying Google technologies to solve real-world challenges.
- Engaged in hands-on sessions, such as coding workshops and project-building, to strengthen technical skills.

LANGUAGES

Bahasa Indonesia	: Native
English	: Professional Working Proficiency (B2-C1)
