

Veri Marsil Marpaung

Backend & Full-Stack Software Engineer

verimarpaung98@gmail.com | +6281370349867 | verimarpaung.netlify.app | linkedin.com/in/verimarpaung

Software Engineer with a strong foundation in backend development, distributed systems, and server-side architecture. Final-semester Software Engineering Technology student at Del Institute of Technology, with hands-on experience building microservices ecosystems, API gateways, and authentication systems using Laravel, Go, and Python. Skilled in designing relational and non-relational database schemas, implementing JWT-based auth, Redis rate-limiting, and deploying containerized services with Docker. Comfortable across the full backend stack and open to roles in software engineering, backend development, or any position where building reliable, scalable systems is at the core.

EDUCATION

Del Institute of Technology

Bachelor of Applied Science in Software Engineering Technology | GPA: 3.72/4.00 | Aug 2022- Jul 2026 (Expected)

PROJECTS

Final Year Thesis Project – TAPATUPA (Ongoing)

Backend Developer

- Architecting a multi-tenant microservices ecosystem with a centralized API Gateway in Laravel, enforcing strict tenant isolation and secure cross-service routing at the infrastructure level.
- Engineering a dedicated Authentication Service with JWT-based session governance, implementing token validation and expiry enforcement to eliminate unauthorized access vectors across all services.
- Integrating Redis-backed rate limiting at the gateway layer to reinforce backend resilience against high-traffic scenarios, with an ongoing load-testing framework to quantify security overhead on system throughput.

StockFlow (Real-Time Inventory Management)

Fullstack Developer – [github](#)

- Engineered a concurrency-safe stock engine that eliminates overselling under simultaneous writes, using optimistic locking with a single atomic version-guarded UPDATE that returns HTTP 409 on stale writes instead of locking rows, verified live with concurrent two-browser conflict demos.
- Built Architected an event-driven pipeline across 5 containerized services (Next.js, Laravel API, queue worker, PostgreSQL, Redis), offloading threshold checks, low-stock notifications, and audit logging to asynchronous Redis-queue jobs to keep the write path fast and decouple critical mutations from background work.
- Drove the build strictly test-first with 40+ passing feature tests committed before implementation, a Redis caching layer (write-through invalidation, per-entity TTLs) behind a repository pattern, and 20+ REST endpoints documented in OpenAPI/Swagger.

Balige Traditional Market (E-commerce)

Fullstack Developer - [github](#)

- Led a cross-functional team of 5 in architecting and delivering a full-scale e-commerce platform end-to-end, owning backend business logic through Laravel's MVC pattern from initial design through deployment.
- Designed and optimized relational database schemas in MySQL to robustly handle inventory management, shopping cart state, and order processing pipelines across the platform.
- Drove full project ownership beyond code, establishing authentication protocols, managing user session security, and producing comprehensive documentation covering system architecture, user flows, and backend specifications.

WORK EXPERIENCES

Jatis Solutions | Jakarta

May 2025 – Present

Java Developer Intern

- Developing and maintaining backend services using Java, Spring Boot, and Grails within an enterprise application environment.

- Assisting in writing clean, efficient, and well-documented code while supporting performance optimization and refactoring tasks.
- Writing unit and integration tests to ensure code quality and collaborating with the team on enhancing existing applications.

Huawei Tech Investment | Palembang

Jun 2025 – Dec 2025

Assistant Project Controller Intern

- Oversaw the full project lifecycle across 2,000+ sites in two regions, proactively identifying schedule risks and delivering structured daily/weekly/monthly progress reports to Project Managers and customers.
- Coordinated 25 subcontractors across South and North Sumatra while steering integrated plan management, formulating master plans, task breakdowns, and resource allocation frameworks to ensure process alignment and on-time delivery.
- Maintained Huawei's ISDP system through data validation and scope breakdown analysis, ensuring accurate project records and standardized reporting across two concurrent telecom projects.
- Developed a Python automation script to fetch project data from Google Sheets, generate structured Excel reports, and distribute email summaries to stakeholders on a scheduled basis (Monday/Friday).

Garuda Ace 2.0 | Remote (University of Chicago)

Jan 2025 – Jul 2025

Research Trainee

- Selected to participate in a prestigious international system and AI research training program led by Prof. Haryadi Gunawi, admitting only the top 50 students in computer science and related disciplines.
- Critically evaluated 40+ Software Engineering papers across top-tier conferences and reproduced 5 technical studies, applying critical thinking and systematic analysis to identify reproducibility gaps and validate research findings.

Kemenko PMK | Toba

Dec 2023 - Sep 2024

Co-Mentor Program (KWP)

- Coached 20+ youth entrepreneurs in the Lake Toba region, fostering entrepreneurial mindset and business acumen.
- Pioneered and delivered entrepreneurship training programs focused on managerial competence, innovation, and marketing execution.

ORGANIZATION & LEADERSHIP EXPERIENCES

Student Association of Software Engineering IT DEL (HIMATERA)

Oct 2024 - Jun 2025

Head of Event Division

- Directed end-to-end execution of multiple technical webinars and inauguration events, meeting strict deadlines while securing internal and external sponsorships.

Google Developer Student Club (GDSC) IT Del

Sept 2023 – Aug 2024

Member

- Contributed to peer-led projects applying Google technologies to real-world problems, and deepened practical skills through intensive coding workshops and build sessions.

CERTIFICATION

Badan Nasional Sertifikasi Profesi (BNSP)

Mar 2023 - Sept 2023

- Certified by BNSP in Software Development with competency in Junior Mobile Programming. Successfully built and tested a mobile application as part of the assessment. Certification valid for 3 years.

SKILLS

- **Programming Languages:** PHP, Java, Go, Javascript, C
- **Backend & Frameworks:** Laravel, Node.js, Flask, React
- **Database:** MySQL, PostgreSQL, Redis, MongoDB
- **Methodologies:** Scrum, Agile, SDLC, Lean
- **Tools & Miscellaneous:** API Gateway, RESTful APIs, Git, JWT, Docker, Microservices

- **Other Skills:** Research and Data Analytics, Project Management, Stakeholder Management, Leadership, Problem Solving, Analytical Thinking, Adaptability, Teamwork, Decision Making,
- **Languages:** English (Professional) and Bahasa Indonesia.
